

Testimonial

I'm Li Letian, from Taian, Shandong, People's Republic of China.

My Chinese school Shandong Electric Power International School cooperates with my Singapore School Shelton College International. When I was in China, I study Power Engineering, and now when I am in Singapore, I am studying Business Management & Travel Tourism and Hospitality.

I'm working at Vivo City Dian Xiao Er which belongs to Y.E.S F&B Group Pte. Ltd. From 01-12-2010 and will be ending on 22-03-2011. The company specializes in Chinese food, especially of fresh roast herb duck. Between 06-10-2010 to 30-11-2010 I have worked at Causeway Point Dian Xiao Er.

This is my first work and also the first time earning money, everything about me is fresh. So I begin to study from the basic things, learned how to order, send dishes, deurate and communion with customer. Then is to promote my work quality, learned how to provide wonderful service to customer and work to deal the relation with colleagues so can work efficiency. Most of my colleagues came from China, few came from Malaysia and Singapore. They're all friendly and accommodating. My manage Jiang Yuanqing is from Shandong, same with me. She is a capable leader. From her, I learned how to lead 21 staffs work as a team. With the 6 months practice, I sum up a truth: how much you pay out, how much you get.

The Shelton's teaching is flexible and effective; students in class are happy and learn knowledge at the same time. The class always interest and dramatic, we can discuss with my classmates who come from all over the world, so I know and meet different point of view and knowledge from different country. This opens my eyes and brings up my international eyeshot. When we are having class, the school begins to help us find company to have internship; all of us were given a good internship before the end of study.

The services and care of school is good, we can get useful information quickly, and the school staff can help us deal with the problems we faced. We have library, free Wi-Fi allows us to connect to Internet, school bus bring us go and back to school, in our hostel there are aircon, icebox, micro-wave, TV and a biddy help us clean room. The school helps us to apply the Student's Pass and Work Permit.

My plan after I finish internship is go back to China and continue to study Power Engineering for another year. Then I will graduate from Shandong Electric Power International School and Shandong Electric Power School, I plan to work in Power Industry.

I have some advice for fellow students: do not think overseas is heaven, there also has compete, dark, lampoon and unfair. To do more and learn more, than you can get respect. Don't play computer games so much, read some books, English books better that are good for you and your future. Go outside to walk and see more; use your eyes to know Singapore. Save time, the time you have is a little. The last is love your life, everything is significant, enjoy it.
